Victoria Kayode

Atlanta, GA | 470-985-6669 | damisikayode03@gmail.com | linkedin.com/in/victoriakayode

Education

Kennesaw State University Kennesaw, GA
B.S. Computer Engineering, Cum Laude | GPA: 3.57/4.0 *Dec. 2024*

- **Relevant Coursework:** Advanced Embedded Systems, Data Collection & Sensors, PCB Design, Computer Networks, Senior Project Design
- **Certifications & Training:** AWS AI Practitioner Challenge (Completed, 2026) | AWS Agent Engineer Nanodegree Program (In Progress)

Technical Skills

Languages: Python, C, C++
Engineering & Cloud: Embedded Systems, Arduino, STM32, Raspberry Pi, Sensor Integration, GPS, PCB Design, System Architecture, AWS IoT
Product & Tools: Competitive Research, User Research, Product Requirements (PRDs), Technical Documentation, Figma, FlutterFlow, Fusion 360, Jira, Git/GitHub, AWS PartyRock, SuperAnnotate

Experience

Handshake AI Nov. 2025 – Present
AI Evaluation & Technical Research Analyst *Remote*

- Evaluated **100+ AI test cases across 4 technical domains**, identifying accuracy and reasoning errors and documenting verified corrections for model evaluation.
- Reviewed **50+ model outputs monthly** against quality criteria, recording incorrect answers and recurring issues in structured reports.
- Created multistep chart and table tests in **SuperAnnotate**, using answer keys and scoring criteria to identify visual reasoning failures.

News Corp Aug. 2025 – Oct. 2025
AI Product Manager Intern *Remote*

- Analyzed **500+ survey responses** and developed **5 audience personas**, using reader preferences and trust concerns to guide product recommendations.
- Compared content discovery and personalization across **4 platforms** (TikTok, Spotify, New York Post, and BBC), presenting findings to support feature decisions.
- Proposed **3 features** for personalized feeds, weekly topic roundups, and short-form video; testing showed a **20% increase in reader engagement**.

Projects

LOCIT (Location Integrated Tracker) | *Python, C, Raspberry Pi, AWS IoT, FlutterFlow, Figma, Fusion 360*

- Led a **4-person engineering team** from design through testing to build a **Raspberry Pi**-based wearable safety tracker with GPS monitoring and geofencing alerts.
- Wrote the **product requirements document (PRD)** with measurable targets, including **24-hour battery life** and geofencing alert accuracy, and tested the prototype against them.
- Improved sensor data transfer speed by **20%** by replacing direct AWS integration with a web server, enabling faster GPS updates and geofencing alerts.
- Tested GPS tracking and geofencing alerts across **20+ scenarios**, achieving **98% location accuracy** and **100% alert accuracy**.
- Designed a **3D-printed enclosure** in Fusion 360 for the GPS module, camera, and battery, and demoed the system to **non-technical audiences**.

Raspberry Pi Weather Station | *Python, Raspberry Pi, AWS IoT*

- Automated temperature, humidity, and pressure readings at **10-second intervals** using Python and Raspberry Pi for continuous environmental monitoring.
- Connected **500+ daily sensor readings** to AWS IoT and a dashboard, allowing users to monitor conditions remotely.

Fairy Job Mother | *Figma, Product Design, Live AI Integration*

- Defined **product requirements** and designed **user flows in Figma** to help recent graduates and career changers connect their experience to job requirements and identify projects that demonstrate relevant skills.
- Built and deployed **live AI features** that analyze user experience against job descriptions and provide tailored resume suggestions, skill gap guidance, and portfolio project recommendations.
- Tested the web app with **10+ users** and refined recommendations based on feedback; **7 of 10 users** surveyed reported greater clarity in presenting their transferable skills on targeted resumes.

Leadership

SWE Outreach Chair (2022 – 2024): Led **5 STEM outreach events** for K–12 students.
NSBE Programs Committee (2023 – 2024): Helped organize academic and career events serving **100+ students**.
